A decorative graphic on the left side of the slide. It includes a green circle at the top left, a red rounded rectangle with a wavy pattern at the top right, a large yellow rounded rectangle with a wavy pattern in the middle left, a blue rounded rectangle at the bottom left, and a green rounded rectangle with a wavy pattern at the bottom right.

Planning for Agent Assist

Planning for Agent Assist

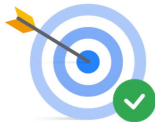

Objectives

01

Understand key considerations when planning for Agent Assist.

02

Review Agent Assist components and workflow,

Planning for Agent Assist

Objectives

01

Understand key considerations when planning for Agent Assist.

02

Review Agent Assist components and workflow,

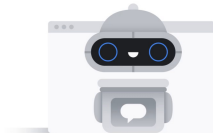

Agent Assist empowers human agents
through the **power of AI**.

Agent Assist empowers human agents
through the **power of AI**.

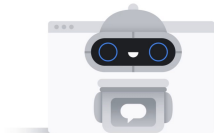

Agent Assist

AI empowers human agents to be more productive and provide better service, by providing in-the-moment assistance.

Agent Assist

AI empowers human agents to be more productive and provide better service, by providing in-the-moment assistance.

Agent Assist implementations

Benefits

1

Agents can handle
more queries, more
efficiently

2

Response times are
sped up

3

Quality of customer
and human agent
interactions is
improved

Agent Assist implementation

Key considerations

- 1 What Agent Assist features will be used?

Agent Assist implementation

Key considerations

- 1 What Agent Assist features will be used?

Agent Assist implementation

Key considerations

- 1 What Agent Assist features will be used?
- 2 How will input `chat` or `audio` be sent in to Agent Assist?

Agent Assist implementation

Key considerations

- 1 What Agent Assist features will be used?
- 2 How will input **chat** or **audio** be sent in to Agent Assist?

Agent Assist implementation

Key considerations

- 1 What Agent Assist features will be used?
- 2 How will input **chat** or **audio** be sent in to Agent Assist?
- 3 How will **responses** be presented to human agents on their **Agent desktop**?

Agent Assist implementation

Key considerations

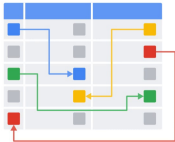

- 1 What Agent Assist features will be used?
- 2 How will input **chat** or **audio** be sent in to Agent Assist?
- 3 How will **responses** be presented to human agents on their **Agent desktop**?
- 4 How does Agent Assist integrate with other Google Cloud components and other CES solutions?
